

Project Brief: "SwiftTask" Minimum Viable Product(MVP)

Product Vision

A lightweight, single-page web application that allows a small team to organize their daily work. The focus is on speed and simplicity—eliminating the "bloat" of traditional project management tools.

Functional Requirements

The system must allow users to manage their personal work queue through the following features:

1. **Create Tasks:** Users can add a new task by providing a title and a brief description.
2. **View Task List:** Users can see a list of all current tasks displayed on a dashboard.
3. **Toggle Status:** Users can mark a task as "Complete" or "Pending" with a single click.
4. **Delete Tasks:** Users can remove tasks that are no longer relevant.
5. **Data Persistence:** Tasks must be saved in a database so they remain available after a page refresh.

Technical Constraints & "Definition of Done" (DoD)

To ensure quality during the **Sprint Review**, every task must meet these criteria:

- **Code Quality:** The Java code must follow standard naming conventions (CamelCase).
- **API Standards:** The backend must return appropriate HTTP Status Codes (e.g., 201 Created for new tasks).
- **UI/UX:** The interface must be responsive and provide visual feedback (e.g., a "Completed" task should look different from a "Pending" one).
- **Integration:** The Frontend (JS) must successfully communicate with the Backend (Spring Boot) without hardcoded data.

Initial Product Backlog (User Stories)

US1: Add a Task. As a user, I want to add a new task, so that I don't forget what I need to do. AC: GIVEN I am on the dashboard, WHEN I enter a task title and click 'Submit', THEN the task should be saved and appear in my list.

US2: View Task List. As a user, I want to view all my tasks in one list, so that I can plan my day. AC: GIVEN there are existing tasks in the system, WHEN I open the application, THEN I should see a list of all tasks displayed.

US3: Complete a Task. As a user, I want to mark a task as finished, so that I can see my progress. AC: GIVEN a task is marked as 'Pending', WHEN I click the 'Complete' button, THEN the task status should update to 'Completed'.

US4: Delete a Task. As a user, I want to delete a task, so that I can keep my list clean. AC: GIVEN an unwanted task exists, WHEN I click the 'Delete' icon, THEN the task should be permanently removed from the list.
