

CPT202 Software Engineering Group Project

Coursework 1 – Software Requirements Analysis

Start date	6 th March 2026
Submission date	29 th March 2026
Assignment type	Individual assignment
Percentage in final marks	20%
Late submission policy	5% of the awarded marks shall be deducted for each working day after the submission date, up to a maximum of five working days. Late submission for more than five working days will be not accepted.
Important notes	• You must submit the report in PDF format via Learning Mall, and name the report as CPT202-A1-StudentID.pdf. • Plagiarism results in award of ZERO mark; all submissions will be checked by TurnItIn. • The formal procedure for submitting coursework at XJTLU is strictly followed. Submission link on Learning Mall will be provided in due course. The submission timestamp on Learning Mall will be used to check late submission. • Generative AI Policy: The use of Generative AI for content generation is not permitted.

Learning Outcome

- A. Work as part of a development team demonstrating effective communication and interpersonal skills to design and develop a software system.
- B. Demonstrate an understanding of the software development process including the principal methods and issues involved in deploying systems to meet business goals.
- C. Specify the requirements of a software system.
- D. Understand the role of properly written documentation in the process of software development.

1. Objective

The goal of this assignment is to collaboratively analyze project requirements within your group while independently developing well-defined **Product Backlog Items (PBIs)** using the Scrum framework.

2. Required Process

1. **Group Requirement Analysis:** Form a group of 7-9 students to discuss the project requirement and identify key modules.
2. **Module Assignment:** Each group member must be assigned the module(s) to focus on.
3. **Independent Development:** Each group member will independently create PBIs for his/her assigned module(s).
4. **Peer Review:** Each group member must participate in a review of one of his/her peer's PBIs, providing constructive, actionable feedback. Arrangement must be made to ensure all members' PBIs are reviewed.

3. Final Report Components

Your report must include the following five sections, adhering strictly to word counts and formatting:

Section 1: Project Identification

- Project Title: The name of the software system your group is developing.
- Identified Project Modules: A list of the modules identified by the group.
- Assigned Module: The specific module(s) you are responsible for in this report.
- Word Limit: (This section does not count towards the word limits of other sections.)

Section 2: Primary Stakeholder and Operational Contexts

- Identify the Primary Stakeholder: Who is the main person or system actor benefited by your module?
- Describe the Operational Contexts: Briefly outline the specific situation(s) or problem(s) your PBIs address.
- Word Limit: Maximum 100 words.

Section 3: Pre-Groomed PBIs

- Develop exactly **five (5)** pre-groomed PBIs for your assigned module(s).
- Each PBI must include a **User Story** and **Acceptance Criteria**.
- **Note:** Marks are only awarded for the first five PBIs; do not submit more.

Section 4: Collaboration (Peer Review and Feedback)

- Include the feedback you provided to a peer.
- Include the feedback your peer provide you.
- Feedback should focus on clarity, precision, and alignment with Scrum principles.
- **Word Limit:** Maximum 150 words.

Section 5: Reflection on Learning

- Reflect on what you learned from the coursework and the peer review process.
- Discuss insights gained, personal growth, and how you incorporated feedback.
- **Word Limit:** Maximum 200 words.

4. Marking Scheme (100 Marks Total)

1. Primary Stakeholder and Operational Contexts (10 Marks)

- Stakeholder & Context Quality (5 Marks):
 - Full Marks (5): Stakeholder is specific (e.g., 'Warehouse Manager'); Context describes a clear problem/need.
 - Partial Marks (1-3): Stakeholder is generic ('User'); Context is just a feature list.
- Logical Mapping (5 Marks):
 - Full Marks (5): Every PBI in Section 2 is directly justified by the contexts in Section 1.
 - Zero Marks (0): PBIs appear "out of thin air" with no matching context.

2. Quality of PBIs (20 Marks)

- Clarity and Precision (10 Marks):
 - Full Marks (8-10): PBIs are written in clear, unambiguous language that any stakeholder can understand.
 - Partial Marks (1-7): Language is overly technical, vague, or creates ambiguity in development requirements.
- Logical Relevance (10 Marks):
 - Full Marks (10): All 5 PBIs are directly relevant to the specific module assigned to the student (e.g., if assigned "Database Management," PBIs focus on data storage/retrieval).

3. Pre-Groomed PBIs (30 Marks)

- Scoring per PBI (6 Marks each for 5 PBIs):
 - Criteria: Each PBI must feature a well-defined User Story and specific, testable Acceptance Criteria.
 - If a student submits more than 5 PBIs, only the first 5 will be marked.

4. Collaboration and Reflection (40 Marks)

- Peer Review and Feedback (25 Marks):
 - Constructiveness (10 Marks): Feedback offers actionable, specific suggestions for a peer's improvement.

- Depth of Analysis (10 Marks): Feedback demonstrates a deep understanding of Scrum principles and the technical clarity of the peer's PBIs.
- Clarity and Communication (5 Marks): Feedback is well-structured and easy for the peer to understand.
- Reflection on Learning (15 Marks):
 - Insightfulness (5 Marks): Reflection shows deep thought regarding the Scrum process and team collaboration (max 100 words).
 - Personal Growth (5 Marks): Highlights specific skills gained or shifts in perspective.
 - Feedback and Application (5 Marks): Explicitly discusses how peer feedback was understood or applied to the work.
